About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing 20 000 terms and definitions in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

65 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: csc@iec.ch.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTRIC VEHICLE CONDUCTIVE CHARGING SYSTEM –**Part 21-2: Electric vehicle requirements for conductive connection to
an AC/DC supply – EMC requirements for off-board electric
vehicle charging systems****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61851-21-2 has been prepared by IEC technical committee 69: Electric road vehicles and electric industrial trucks.

This first edition, together with IEC 61851-21-1, cancels and replaces IEC 61851-21:2001. It constitutes a technical revision.

This edition includes the following significant technical changes with respect to IEC 61851-21:2001:

- a) this document addresses now only EMC related tests instead of other electrical tests;
- b) Clauses 2 and 3 have been updated;
- c) the port definition, the test-setups and their corresponding limits as well as the operation modes are defined more precisely;

d) Annexes A to F have been added.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
69/531/FDIS	69/545/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 61851 series, published under the general title *Electric vehicle conductive charging system*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

<https://standards.iteh.ai/catalog/standards/iec/b44a84f6-63d7-43a9-a7e6-4049d49edf57/iec-61851-21-2-2018>

ELECTRIC VEHICLE CONDUCTIVE CHARGING SYSTEM –

Part 21-2: Electric vehicle requirements for conductive connection to an AC/DC supply – EMC requirements for off-board electric vehicle charging systems

1 Scope

This part of IEC 61851 defines the EMC requirements for any off-board components or equipment of such systems used to supply or charge electric vehicles with electric power by conductive power transfer (CPT), with a rated input voltage, according to IEC 60038:2009, up to 1 000 V AC or 1 500 V DC and an output voltage up to 1 000 V AC or 1 500 V DC.

This document covers off-board charging equipment for mode 1, mode 2, mode 3 and mode 4 charging as defined in IEC 61851-1:2017.

Cables where there is no electronics or no electric/electronic switching are considered as passive (benign) and are deemed to comply with the emission and immunity requirements of this document without any need for testing.

This document does not apply to any on-board components or equipment of charging or power supply systems being part of the vehicles. The EMC requirements for such equipment are covered by IEC 61851-21-1: 2017.

Compliance with the emission and immunity requirements of this document is verified where it can be demonstrated that the equipment under test (EUT) meets the respective limits, during type tests in the measuring arrangement of this document.

Requirements for electric vehicle wireless power transfer (WPT) systems are covered in IEC 61980 (all parts).

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. 3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 61851-1 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1 associated equipment

AE

equipment needed to exercise and/or monitor the operation of the EUT

3.2

port

particular interface of the specified apparatus with external electromagnetic environment

Note 1 to entry: See Figure 1.

¹ 3rd edition (2008). This 3rd edition has been replaced in 2016 by a 4th edition CISPR 25:2016, *Vehicles, boats and internal combustion engines - Radio disturbance characteristics - Limits and methods of measurement for the protection of on-board receivers*.

Figure 1 – Examples of ports of off- board charging equipment

3.3

enclosure port

physical boundary of the apparatus through which electromagnetic fields may radiate or impinge on

[SOURCE: IEC 60050-445:2010, 445-07-04, modified – The words "time relay" have been replaced by "apparatus".]

3.4

power input port

input port at which a conductor or cable carrying the electrical power needed for the operation (functioning) of an apparatus or associated apparatus is connected to the apparatus

Note 1 to entry: A power input port can be AC or DC.

3.5

wired network port

port of connection for voice, data and signaling transfers intended to interconnect widely dispersed systems by direct connection to a single-user or multi-user communication network

<https://standards.iteh.ai/catalog/standards/iec/b44a84f6-63d7-43a9-a7e6-4049d49ed57/iec-61851-21-2-2018>

Note 1 to entry: Examples of these include CATV, PSTN, ISDN, xDSL, LAN and similar networks.

Note 2 to entry: These ports can support screened or unscreened cables and can also carry AC or DC power where this is an integral part of the telecommunication specification.

[SOURCE: CISPR 32:2015, 3.1.32]

3.6

signal/control port

port at which a cable or conductor is connected for the purpose of transmission of signals excluding wired network and CPT ports

Note 1 to entry: Examples include RS-232, Universal Serial Bus (USB), High-Definition Multimedia Interface (HDMI), IEEE Standard 1394 ("Fire Wire"), analogue/digital input/outputs.

Note 2 to entry: An example of a control port is a port used to start the charging operation when a signal indicates that the energy tariff is lower and/or charging is delayed for energy management purposes.

3.7

conductive power transfer port

CPT port

power output port of charging equipment for electric vehicles serving conductive power transfer (CPT) of LV AC or DC electrical energy to the secondary device of the charging system (i.e. to the load to be charged or supplied with power) and also providing all required signaling/controlling and/or communication functions, for example control pilot, CAN and private PLC/T

3.8**equipment under test****EUT**

off-board components or equipment of systems that are used to supply or charge electric vehicles with electric power by conductive power transfer (CPT) which are covered by the scope of this document

3.9**powerline telecommunication****PLT****powerline communication****PLC**

signal transmission technology used for connection to a wire-line PSTN (public switched telephone network) via the LV AC (or DC) mains grid

Note 1 to entry: PLT/C is a transmission technology used for communications, data transfer, signaling/controlling and similar purposes in private and/or local area networks via a variety of types of power lines such as charger cables of off-board charging equipment for electric vehicles.

3.10**portable equipment**

cord and plug connected equipment, cable assembly, adaptors or other accessories that are capable to be carried by one person and designed and intended to be carried within the EV

[SOURCE: IEC 61851-1:2017, 3.6.5]

Note 1 to entry: The term "high voltage" may be defined with a different voltage range in other standards.

[IEC 61851-21-2:2018](https://standards.iteh.ai/catalog/standards/iec/b44a84f6-63d7-43a9-a7e6-4049d49edf57/iec-61851-21-2-2018)

3.12 low voltage**LV**

operating voltage between 60 V to 1 000 V

Note 1 to entry: The term "low voltage" may be defined with a different voltage range in other standards.

[IEC 61851-21-2:2018](https://standards.iteh.ai/catalog/standards/iec/b44a84f6-63d7-43a9-a7e6-4049d49edf57/iec-61851-21-2-2018)

operating DC voltage below 60 V, for example nominal voltages of 12 V, 24 V or 48 V

Note 1 to entry: The term "high voltage" may be defined with a different voltage range in other standards.

4 Test plan

4.1 General

An EMC test plan shall be established prior to testing. It shall contain, as a minimum, the elements given in Clause 4.

4.2 Configuration of EUT

All tests shall be carried out using a representative EUT and charge cable (at the conductive power transfer port – CPT port) to the AE/vehicle simulator as supplied by the manufacturer. Where the charge cable is not provided with the EUT (e.g. case B according to IEC 61851-1:2017), tests shall be performed with a typical length and geometry of the charge cable.

The contents of the standards referenced in this document are not repeated here; however modifications or additional information needed for practical application of the measurements of EUT's is given in this document.

The tests shall be carried out within the specified operating range of the EUT and at its rated supply voltage.

Test setups according to Annex A shall be used for the immunity and emission tests above 150 kHz.

In-cable control and protection devices (IC-CPDs), other portable equipment and mode 2 equipment shall be tested as per table top equipment.

4.3 Termination of the EUT during testing

All ports of the EUT shall be terminated with ANs/ISN or respectively CDNs as appropriate. The power input port, signal control port and wired network port shall be terminated according to Annex C.

The CPT port of the EUT shall be connected to the associated equipment (AE) covering the artificial networks (ANs) and/or impedance stabilization networks (ISNs) according to Annex C forming the vehicle simulator and connecting to an appropriate load.

The signalling/control lines of the CPT port shall be terminated according to Annex C and provide communication by respective simulation and fed in via suitable coupling devices.

4.4 Operating and test conditions

4.4.1 General

The following measurements and assessments may be performed in any order.

4.4.2 Immunity

iTeh Standards

(<https://standards.iteh.ae/catalog/standards/iec/b44a84f6-63d7-43a9-a7e6-4049d49edf57/iec-61851-21-2-2018>)

Document Preview

The immunity requirements are specified in Table 1, Table 2, Table 3 and Table 4 according to the type of power input (AC or DC) and environmental classification (residential or non-residential) of the EUT to be tested.

<https://standards.iteh.ae/catalog/standards/iec/b44a84f6-63d7-43a9-a7e6-4049d49edf57/iec-61851-21-2-2018>

Testing shall be performed in the following two operating modes:

- waiting mode: to simulate when the EUT is fully powered up and connected to a vehicle but not charging (for example, when the batteries are fully charged or if waiting for the power grid to decide when to charge);
- charge mode: during testing, the EUT shall be operated at 20 % of the maximum rated power $\pm 10\%$. If this is not possible according to IEC 61851-1:2017, the percentage may be raised.

It has been considered that no assessment is required when no load is connected since waiting mode adequately addresses this mode of operation.

In-cable control and protection devices (IC-CPD) shall be tested as off-board AC charging equipment.

The mode of operation shall be specified and the actual conditions, during the tests, shall be precisely noted in the test report.

4.4.3 Emissions

Emission requirements are specified in Table 7 to Table 14 and Table 16 to Table 19.

Testing shall be performed in the following operating modes:
